11-29	D	3400 Blk NE 6 th Pl	NF – Unsecured Window	Collectibles, Jewelry

October / November 2010

There were **20** residential burglaries during the month of October, with 0 occurring at an active Block Watch residence. **And** – there were **20** residential burglaries during the month of November, with 0 occurring at an active Block Watch residence

Unfortunately, we are quickly approaching the 600 mark when it comes to stolen vehicles. Not good news for those of us who have “mass produced vehicles” (which applies to the majority of the population!).

There are many ways you can help protect your vehicle from theft. There are no guarantees but you can at least make it inconvenient or uncomfortable for a thief to target your car. Here are just a few :

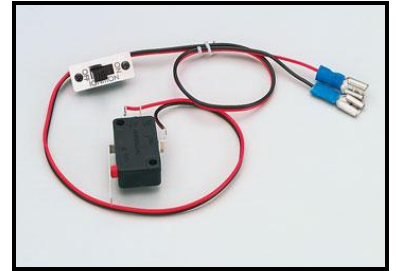

The Club: This is a steering wheel locking device. It fits snugly across your steering wheel, with an extension piece that makes it virtually impossible to steer the vehicle without removing this lock. If a thief wants to take your car and you have this locked securely on your steering wheel, then he will need to saw through your steering wheel to remove it. Which takes more time, which then increases the risk of him being seen and/or arrested. The goal is for the thief to see this lock, decide the profit does *not* outweigh the risk, and move on. Price range: \$25 to \$40

Disklok: This anti-theft vehicle lock covers the entire steering wheel preventing theft of the vehicle and driver's air bag. The Disklok utilizes a steel shell with additional hardened/tempered steel parts. The lock is a high security six-pin cylinder lock. By covering the entire steering wheel, it eliminates steering wheel attack. The security arm extends so that the steering wheel cannot be rotated - it hits the car's door, door frame, seat, windshield, etc. The Disklok is designed to spin freely on the steering wheel. This feature makes it difficult for attackers to get any kind of leverage. Price range: \$95 on up

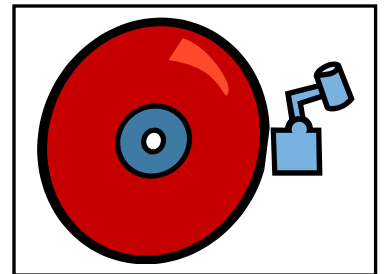

Kill Switch: A kill switch is a simple form of an engine disabler. A self-installed kill switch's main disadvantage is that it typically interrupts only a single circuit. More advanced engine disablers - effective in stopping even professional thieves - interrupt more than one circuit (these are normally installed by the manufacturer, a car dealership or auto accessory outlet). I have an advanced kill switch in my vehicle which was installed by the manufacturer. If my vehicle key is not used to start my vehicle, my car won't turn over. Price range: Self Installed: \$20 and up; Professionally Installed: \$200 and up

IDstickers: IDstickers help protect your vehicle by warning thieves that if stolen, email and SMS alerts will be sent out on your vehicle, security cameras will scan for your license plate, and a reward for information leading to its recovery will be offered. The knowledge that there is an increased risk of being captured by the police will deter thieves from stealing your car and instead persuade them to seek out a less risky target. Contact www.IDSticker.com for additional information about this program. (Note: the Renton Police Department does not endorse this program nor do we participate in it.) Price range: \$15.95

Alarm Systems: Although not as effective a deterrent as they use to be, I think anything that is going to create a lot of noise and may make a thief uncomfortable, is something I'm in support of. An experienced thief can defeat an alarm system without much effort, but layering your crime prevention measures "like an onion" will only serve to assist in keeping your vehicle from being stolen. And that's the end goal, for sure! Price range: Varies

These are just a few examples of the more popular auto theft prevention options. I'm sure if you "Google" options on the computer, you'll be able to find many more. The important part is to make it *inconvenient* and *uncomfortable* for a thief to target your vehicle. Choose what works best for you.
